## Reflective Warming Apparel

Maintaining patient normothermia in the OR is of paramount importance as studies show the risk of complications can increase when patients become hypothermic. Even mild hypothermia can affect patient outcomes. Our line of temperature maintenance products is designed to assist with the preservation and monitoring of patient temperature.

Passive warming blankets and wraps use a combination of materials to help maintain normothermia through thermal retention.

- High Thermal Retention
- Allows Easy Access To Surgical Site
- Cost-Effective Alternative To Active Warming
- Lightweight And Easy To Store
- Single Patient Use
- Non-Linting
