

ALLESORB®

UNDERPADS

High-Performance

When it comes to underpads, due to the range of limitless applications, it is critical to have a product solution that is not only cost-effective and clinically acceptable, but also addresses the multitude of requirements.

With this as our catalyst, Alleset has developed a comprehensive product solution under a singular branding – **Allesorb®** – a premium product offering that sets the industry standards in fluid control applications and is guaranteed to address your patient care needs.

ABSORBS

Allesorb®'s core technology and construction achieves market-leading absorbency and dryness by moving fluids away from the skin, dispersing the fluids throughout the middle layer.

WICKS

The soft cloth like top layer is designed for patient comfort, swiftly pulling moisture away from the patient, locking it into the super-absorbent **Allesorb®** core.

BREATHES

Our strong, breathable base layer completes the highest standard in patient care by allowing air flow and heat reduction, reducing the potential for rashes and infections.
