WASTESTOP™
Waste Containment Basin

Designed for the containment and disposal of fluids in the catheterization lab, our **WASTE**STOP™ fluid containment basin keeps protection in mind. Helping to facilitate collection, absorption, and disposal while reducing potential exposure to staff and patients.

Keeping You Protected

→ Convenient lid design with funneled insertion point to guide fluids into the containment bowl and minimize potential exposure

→ Closure tab, marked with biohazard warning symbol, provides secure seal over the insertion point and clearly identifies hazardous waste

→ Super absorbent solidifier pad quickly gels the contained liquids to help prevent potentially hazardous spills

→ Adhesive tab secures the **WASTE**STOP™ to desired surface to help prevent movement

→ High fluid capacity up to 1000 ml helps manage large volumes of fluid during procedures

Comprehensive Solutions

Multiple configurations designed to meet the unique needs of your facility:

→ Red or yellow basin options
→ Sterile and non-sterile

→ Available assembled or unassembled (bulk)
→ Optional super absorbent solidifier pad
